

Coordinated Adaptation of Session-based Composite Services for the Mobile User

Alan Davy and Brendan Jennings
 Telecommunications Software & Systems Group, Waterford Institute of Technology
 {adavy, bjennings}@tssg.org

Project Objectives

Key to the success of **next-generation mobile communications systems** will be the availability of services tailored to the user's personal needs within his/her current environment.

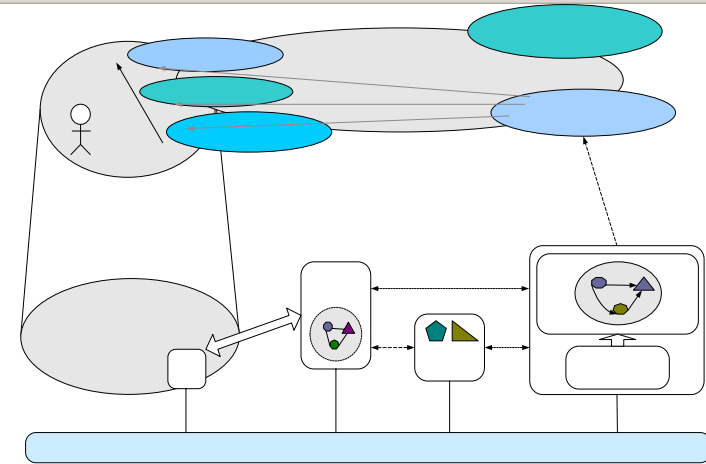

This project will propose a method of **coordinating adaptation** of services within a composite service, in response to changes in the user's environment.
